Dropbox

To connect Dropbox to a **Webitel,** as a call record storage, you need to create a new application from the developer interface: https://www.dropbox.com/developers/

Select the type of **Dropbox API** and provide access to one folder by specifying its arbitrary name:

After creating a new application, you need to generate an access key and copy:

Insert the copied key for the new storage in the domain settings in the Domains section:

Specify this provider as the main one and save the settings of the homer:

Calls to Dropbox will be marked *

Also, these calls will be available in the application:
