

Core Server

The core of the Webitel application server:

- **WebSocket** server for connecting from external web applications.
- **Events**.
- Authorization of users. To execute any REST command, you need to get **token**.
- Interface to REST API v2.

To work, you must have a connection to the following components:

- [Webitel Console](#)
- Telephony server
- Statistics Server (CDR Server)
- MongoDB Databases

The core is written in **JavaScript** using **Node.js**. The source code of the application is available on [GitHub](#).

Port	Destination
10022/tcp	WebSocket RESTFul API .
