Advanced Call Router

Call Routing Server (**ACR**) is designed to configure inbound and outbound call routing, as well as to create interactive voice respone (**IVR**). Routing is configured in the format ACR Scheme. To work, you need to connect to the **MongoDB** database.

The core is written in **JavaScript** using **Node.js**. The source code of the application is available on GitHub.

Port	Destination
10030/tcp	TCP call control server using previously created JSON schemes
