We are pleased to announce the new release of **Webitel 3.4!**

This release has received a new server for working with statistics, conversations and media files. The main difference between **Webitel Storage** and **CDR Server** is the ability to customize personal storage of call recordings. Amazon S3, Backblaze B2, Google Drive, or even Dropbox can be selected as the service provider. Keep a record of your conversations wherever you prefer and where there is enough free space. 😊

Also, we added support for [speech synthesis](#) in voice menus.

We expect your wishes for the further development of the new functionality on [Customer portal](#).

Updated to the latest stable versions of [Docker 1.12](#), [FreeSWITCH 1.6.10](#), [Elasticsearch 2.3](#), [Kibana 4.5](#), [MongoDB 3.2](#) and [NodeJS 6.5](#).

Thanks to the **whole team** that worked on this release.

[Vitaly Kovalyshyn](#), CTO

v3.4.2 - October 20, 2016

Fix of errors found in Webitel **Storage** and **Engine**. Updated [NodeJS 6.9](#), [FreeSWITCH 1.6.12](#) and Kibana 4.6.2

v3.4.1 - September 30, 2016

Fix minor bugs. Updated [NodeJS 6.7](#) and [FreeSWITCH 1.6.11](#)

v3.4.0 - September 16, 2016

The release contains new functionality. Closed more than 20 User Story and Bug Reports.

Webitel WebClient

Added a graphical representation of information from sections:

Updated server status page:

Domains

SMTP settings

Configure SMTP settings for sending messages from [08 Callflow](#) using the [Email](#) component.

Call Record Storage Settings

Ability to set the parameters of the personal storage of conversation records for the domain. Suppliers are supported:

- [Amazon S3](#)
- [B2 Cloud Storage](#)
- [Google Drive](#)
- [Dropbox](#)

Configure SMTP settings for sending messages from Callflow 08 using the Email component.

Statistics

Added the possibility of group uploads of conversations:

Added the ability to delete old conversations records:

Hooks

- Added the ability to send a request for the completion of dialing to the subscriber from the list [13 Dialer](#).
- Added the ability to pre-authorize before sending an HTTP request.

Dialer

- Added the ability to change the priorities of call completion codes.
- Added the ability to start the dialer immediately after adding new subscribers.
- Added the ability to set the maximum time to which attempts to dial the subscriber.
- Added the ability to upload the results of work [13 Dialer](#) to a CSV file.

ACR

- [Speech synthesis](#)
- [Working with strings](#)
- [Working with calendars](#)
- Added section for handling on-disconnect event in JSON Schema
