

# Webitel 3.5.x release notes

We are pleased to announce the new release of **Webitel 3.5!**

In the new release, a transition was made to the new version of Elasticsearch and Kibana, a service was created for a single repository of statistics and conversation recordings from several webitel servers, as well as a significantly improved dialer. Much time was devoted to improving the reliability of the system and correcting errors found.

We expect your wishes for the further development of the new functionality on [Customer portal](#).

Updated to the latest stable versions of [Docker 1.12](#), [FreeSWITCH 1.6.13](#), [Elasticsearch 5.0](#), [Kibana 5.0](#), [MongoDB 3.2](#) [NodeJS 7.2](#).

Thanks to the **whole team** that worked on this release.

Vitaly Kovalyshyn, CTO

## v3.5.0 - December 7, 2016

The release contains new functionality. 10 User Story and Bug Reports are closed.

### Domains

In the Storage settings of section [05 Domains](#), you can now specify how long the call recordings should be kept:

### Users

#### Multiple creation

Section [06 Directory](#) received the ability to create multiple users.

#### IP Registration Restriction

The function of restricting SIP registrations from certain IPs has been added.

### Statistics

Now it is possible to block any entry from automatic or manual deletion:

### Dialer

Added call distribution to operators and general operator settings for the campaign:

### Archive Storage

A new launch mode for **Webitel Storage**, in which the system can receive statistics and record conversations from other webitel servers.

### Kibana

Full transition to Kibana 5
