

Discover

Discover consists of a filtering string, to quickly search for documents, a list of available variables and the main view:

In the upper left corner there is an opportunity to choose an index:

- [CDR](#) - A or B side and the combined index.
- [Accounts](#) - User statuses

In the left menu is a list of all available variables in the documents. You can select any of them and bring it to the registry using the **Add** button:

After the registry has been configured, you can export it to a **CSV / XLS** file, or download an archive with conversation records:

Using the **Save** menu item, you can save the presentation settings, and **Open** allows you to open already saved settings.

The variable is removed from the view using the **remove** button.

By clicking on the variable name, you can view the values or create a quick visualization:

By clicking on the black triangle, you can open and view the entire [JSON document](#):

If there is an associated audio file for the call, you can listen to it on the Recordings tab:
