

Visualize

Visualize allows you to create new visualizations or edit existing ones.

Types of visualization:

- [Area Charts](#)
- [Line Charts](#)
- [Markdown Widget](#)
- [Metric](#)
- [Pie Charts](#)
- [Vertical Bar Charts](#)

To create a new visualization, you must select one of the pre-configured types:

Specify data source:

You can create your source in [Discover](#) or select one of the basic indexes:

- **cdr-a** - [A side of the call](#). Primary leg of the call. On it constructs all reports on a call. Preferred choice for a call report.
- **cdr-b** - [B side of the call](#). The second leg of the call. Using it builds reports with distribution to operators or by call switching chains.
- **cdr** - Combined index A and B sides of the call.
- **accounts** - [Index](#) contains a history of changes in the status of Webitel users.

After selecting the source, the visualization designer opens:

The visualization constructor consists of:

1. Filter menu and save panel
2. Aggregate Indicator Builder
3. Preview
