

# Configure Inbound Routing

In [Webitel WebClient](#), open [Callflow - Public](#). Public is always an external route that comes from the provider. If nothing is configured, the system will discourage all incoming calls. In the **Number** field, you must specify the SIP login of your communication provider. Let's write a simple rule for our *Youmagic* numbers: call user 100 and 101 at the same time. To do this, create an [ACR Scheme](#):

```
[
  {
    "answer": "180 Ringing"
  },
  {
    "bridge": {
      "strategy": "multiple",
      "parameters": [
        "instant_ringback=true",
        "ignore_early_media=true",
        "continue_on_fail=true"
      ],
      "endpoints": [
        {
          "name": "100",
          "type": "user"
        },
        {
          "name": "101",
          "type": "user"
        }
      ]
    }
  }
]
```
